

AWS Jam

A gamified learning environment with common use cases and operational tasks.

AWS Jam is a gamified pre-created infrastructure where you can solve challenges within the AWS environment. The challenges have varying degrees of difficulty and points associated with them. The Jam challenges do not provide a direct answer to the solution, but you can use clues that will help guide you.

You can play, learn, and validate your knowledge of AWS best practices around security, machine learning, DevOps, database, networking, and more.

Upon the completion of an AWS Jam Event, event owners can access reports measuring the performance of their participants and suggestions on areas for improvement.

AWS Jam is available for teams or individuals with AWS Skill Builder subscriptions.

Individuals

- Access a wide range of challenges for personal skill development.
- Start with foundational challenges and advance to more complex scenarios as your skills improve.

Teams

- Promote collaborative problem-solving and knowledge sharing.
- Use AWS Jam for training programs to improve your staff's cloud proficiency in a controlled environment.

Benefits

- **Verify your skills:** Assess your proficiency in various cloud services and architectures, and identify areas of strength and those needing improvements.
- **Learn to solve problems:** Approach and solve complex problems that cover real-world scenarios.
- **Engage in learning:** Dive into a competitive, interactive learning experience that uses time-based challenges and provides a leadership dashboard.
